SecureChoice® Monitoring System

Remember to download our pest app!

Product and application information always at your fingertips.

And please, follow our social media channels.

Stay updated! We regularly focus on industry news, product information and articles.

Rodent detection should be smart...

that's why Syngenta created the SecureChoice® rodent monitoring system.

SecureChoice Monitoring System:

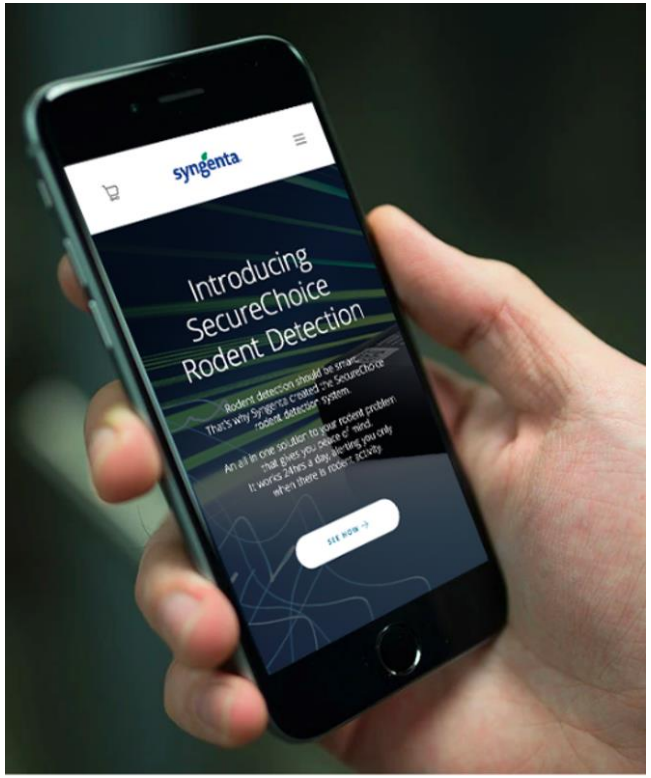
- Plug and play
- Cost effective remote monitoring of rodents

Dual sensing technology (motion and vibration)

Sensors automatically capture rodent activity

Once rodent activity is detected, alert notifications are sent via email in real time

All activity can also be viewed in the online dashboard allowing to optimise rodent control programs and demonstrate success



The SecureChoice Hub

Easy to install

When switched on, the Hub automatically establishes a wireless connection with the internet via cellular connection (additional option of wired LAN if needed)

A single hub or multiple hubs, the data representation will always display in the same user friendly, intuitive way

The Hub can receive alert information from **any number of sensors** and transmit alert data to the server dashboard

If the internet connection is ever interrupted, the Hub will retain the activity data and automatically transfer it to the dashboard when the internet connection is re-established. Date and time stamps will be the time the activity was detected

SecureChoice Sensors

Accurate to reduce false alerts

Each sensor is dual-mode and can detect both rodent **motion** and the **vibration** of an activated trap. Therefore, the sensors can apply to both rodent traps and bait stations

When activated, the sensors automatically signal to the SecureChoice Hub and an alert is then sent to the subscribers via email so that they can implement the appropriate response

The sensors are battery-operated with a **9-year lifespan**

SecureChoice sensors can be fitted to existing rodent monitoring station or inside our own bespoke rodent monitoring stations.

SecureChoice Dashboard

essential, valuable features to support you as pest professionals

A key feature of the dashboard is the use of an interactive floor plan, with drag & drop function

Always know the status of your site monitoring sensors

The location of any alarm is instantly visible allowing for targeted investigation and treatment

Easily generate heatmaps to visualise activity over time and demonstrate the effectiveness of rodent control programs. Know where the rodents are, have been and where they are not

Delivering cost and labour efficiencies

Bespoke Syngenta Rodent Monitoring Station

SecureChoice® Monitoring System

'So, why should you always be considering SecureChoice as part of your IPM?'

- *Demonstrate your service compliance, demonstrate*
- *our industry commitment to modernising and embracing change and innovation.*

- *Knowledge and transparency that just isn't available by traditional pest management alone.*

- *Sustainability & stewardship. Demonstrate your commitment to responsible pest management and use of rodenticides.*

- *Duel sensor technology. Overcome rodent behavioural resistance.*

- *Further development & support from our teams in Switzerland, Denmark and the UK.*
